

Design Sprint Day 2:

Murtadha Marzouq
Dr. Mijas
Software Engineering

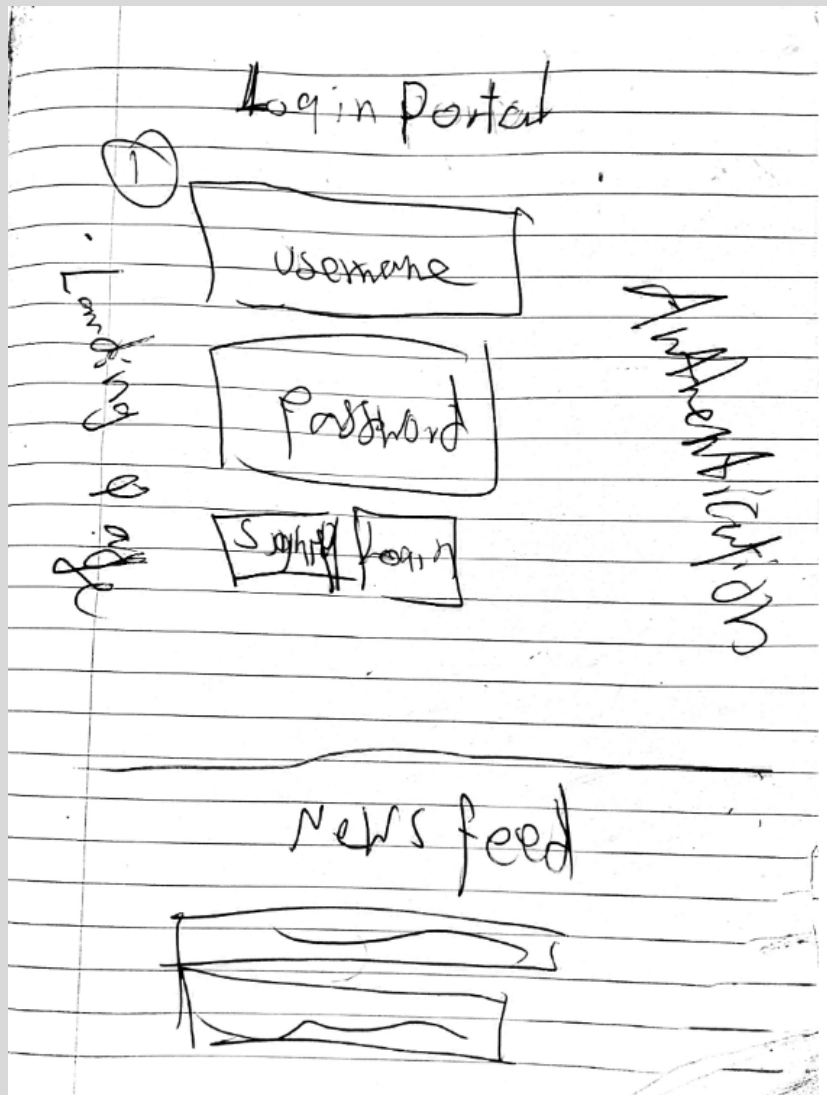

Goal:

My goal for the **Hub** is a software product that will help students find ways of networking with others in their field of interest and best decide what jobs and careers they should learn and practice for their future careers. The product would help the student achieve their goal. Unlike [Connect \(Links to an external site.\)](#), the **Hub** will allow collaboration and social networking tools to help find a job post-graduation. To make the transitions between school and the workplace easier. We are launching the product because this product, is what we feel; we need as students, Developing a product will be constantly changing and evolving. As such, We as software engineers are in a position where we can improve people's lives through excellent engineering and teamwork.

Master Features List:

Feature	Description
Tagging	Courses will be tagged to particular fields of interest and careers
Connections	Allow users to connect with students who are in the similar career path and ask opinions or network.
Events	Allow users to host and RSVP into career fair events with filters
Advanced Description	Expandable description for course work leading to a more understood outcome.
Recommendations	Future courses will be recommended based on previous courses and skills acquired from class history

Goal: To make the transitions between school and the workplace easier.
